Location: Buenos Aires, Argentina
Phone: +54 9 11 6641 4910

Full Stack Web Developer with a background in Web Design. Experience working with React, Redux, NodeJs, Express, SQL, and other technologies in the sector. Currently, I am in continuous learning, developing personal projects to reinforce what I have learned and expand my knowledge. I am a sociable and proactive person who works well in a team, embraces challenges, and excels at problem-solving. I have acquired these skills during my previous work experience in the construction industry, where I physically carried out tasks on-site. As a Construction Manager, I successfully completed projects within agreed timelines and budgets. I led teams of architects and administrative staff, as well as on-site personnel and subcontractors for the execution of all tasks.

PROYECTOS

Jun-2023 Full Stack Web Developer – Consumedic

Academic Experience – Henry Bootcamp – Final Group Project

Designed and developed an App that allows users to book appointments with healthcare professionals, including third-party authentication, Mercado Pago integration, Cloudinary integration, Admin panel, Medical and Patient profile panels, mailing functionality, local storage, and logical deletion.

Specifically, some of the tasks I was responsible for included:

- Creating database models, defining their relationships, and designing the server request routes with their respective logic for data retrieval.
- Developing the agenda component for each doctor, both in the Backend and Frontend.
- Building the Medical profile panel, where information about patients, their medical history, appointments, and the ability to send messages and upload files was displayed.
- And more

Tecnologías Utilizadas:

- Frontend: JS, React, Context, Material-UI
- Backend: NodeJS, Express
- Extras: Nodemailer, Cloudinary, Mercado Pago, Google Login
- Database: PostgreSQL, Sequelize
